

AVI for hospital employees in Trento, Italy

More than 800 hospital employees at the Trento hospital in northern Italy, benefit from hands-free vehicle access using TagMaster's long-range AVI system. The TagMaster system helps prevent unauthorised vehicles from entering the parking area and speeds up the traffic flow at the entrance and the exit lanes, minimising queues at peak hours. This new installation is one of many similar installations performed by TagMaster partner GS Generale in Italy.

First LR-3 installation in Kuala Lumpur

The intensified interest for gated communities has increased the demand for automatic vehicle identification (AVI) systems. TagMaster has seen an increasing demand for high-end RFID products, to supply residents with hands-free and secure AVI. "For people living in a gated community, safety and convenience are very important issues. We can see a trend in using high-end RFID products, where quality, long-range and design is of great importance to residents as well as operators," says Area Manager Mr. Olle Axling, TagMaster Asia.

One of the most recent installations of this kind is also the first LR-3 reader installation in Kuala Lumpur. Casa Indah Condominium in Kuala Lumpur has over 1,200 residents, which all use TagMaster's long-range RFID system for hands-free vehicle access.

TagMaster CombiTag – now with your choice of prox-solution

TagMaster's "2 in 1" ID-tag can now be ordered with several different proximity solutions integrated with TagMaster's long-range RFID technology. The CombiTag offers the user the simplicity of one single card for both long-range and short-range identification.

The CombiTag is often used by company employees to gain access to a parking facility as well as to an office entrance. The CombiTag is mounted in a small holder inside the vehicle's windshield and is easy for the driver to take from the car and use for personal access. The CombiTag is a dual purpose card, simple and practical. Examples of proximity technologies supported by TagMaster CombiTag are *eProx*, *iCLASS* and Mifare. New TagMaster North America representative

At the end of June TagMaster announced its new partner in North America. TagMaster North America, Inc. is managed by Mr. Ali Khaksar who provides local expertise and sales leadership to the new company. TagMaster sees a great value in being close to the market and anticipates a significant potential for expanding the RFID sales in North America. The new office will play a key role to maintain the strong partner relationships already established within the parking and vehicle access industry as well as expanding the business by providing outstanding sales support as well as pre- and post-sales technical support on all TagMaster equipment.

In addition, one of the key strengths will be to offer same day shipping within North America for TagMaster equipment in stock and free ground shipment on all TagMaster products.

The new office was introduced at the annual PIE show in Chicago in August and will also be exhibiting at the NPA show in October.

TagMaster road show in Asia

A series of RFID seminars held by HID Asia Pacific Ltd. together with their closest application development partners are taking place in India, Thailand and the Philippines during the second half of 2006. TagMaster is one of the partners who present its products and applications in detail for the attendees, enabling end-users and system integrators to interact and gain a better understanding of long-range RFID technology. TagMaster is represented by Mr. Olle Axling from TagMaster in Singapore.

TagMaster at PIE 2006

The annual Parking Industry Exhibition was this year held in Chicago. TagMaster North America Inc. showcased TagMaster's new generation readers to the parking industry. New features such as "open platform", "compact design" and "network enabled" were well received by the market. These high-end products are very well suited for university parking, gated communities, office parking and other installation sites requiring convenient, safe and long-range AVI equipment.

"With another successful show, TagMaster continues to strengthen its reputation as a leader of high-end RFID products in the parking industry. We enjoyed the scene of visitors who were taking pictures of our new products with their cell phone cameras. Our LR-6 reader generated great interest and gained the celebrity status during the show". says Mr. Ali Khaksar, Managing Director of TagMaster North America Inc.

TagMaster North America Inc. signs distributor agreement with Apollo Security Systems

On August 10th, TagMaster North America Inc. announced their distributor agreement with Apollo Security Systems, a leading manufacturer of access control and security management systems. Apollo will globally integrate the TagMaster products as a member of their product range for access control systems.

"We are looking forward to working closely with Apollo Security Systems, to offer their customers the ability to increase their security level. We are confident that TagMaster products with long-range and hands-free operation provide significant value added opportunities". says Ali Khaksar, Managing Director of TagMaster North America Inc.

"Apollo plans to distribute the TagMaster long-range products through the Apollo dealer network that extends to more than 60 countries. The reliability and flexibility of the TagMaster products fits very well with the varied requirements of Apollo customers." says William Lorber, Vice President of Sales and Marketing of Apollo Security Systems.
