ACTS

Access Control Tracking System

Enterprise Version

Access Control Tracking System (ACTS) Enterprise is the server-based access control application software for TagMaster North America's Automated Vehicle Identification (AVI) solution. ACTS Enterprise is fully customizable for each project, offering enhanced features such as a schematic map of controlled parking facilities, support of LiveCam feature, selective notification of events, detailed schedules and reports, management of multiple locations, anti-passback capability, data integration, and reversible lane control using web-enabled interface.

Web-Enabled Interface

ACTS's easy-to-use web-enabled interface allows administration of the system from anywhere using any popular web browser. Using this interface, the user can perform configuration tasks such as: opening/closing gates or barriers, administering personnel access, adjusting schedules in real-time, viewing LiveCam feeds, and customizing up-to-the minute access reports.

Management of Multiple Locations

Administrators can manage multiple locations from a single position through ACTS's server-based access control. Satellite parking lots and structures are easily controlled or a national chain of parking facilities can access servers in different cities from a primary administration location.

Supports Multiple Devices

Remote control and monitoring of RFID reader, IP Security Cameras, Numeric Counters, Multiple Barriers, and Digital Signs.

KEY FEATURES

- Server-based access control software
- TCP/IP enabled, works in DHCP/Static IP
- Real-time event log viewer
- Notification of events
- Anti-passback capable
- Flexible scheduling scheme
- Manage unlimited cardholders/credentials
- Unlimited storage of daily events
- Database backup and restore features
- Data Integration

ACTS software is © ARMID, Inc. and used under license. Any unauthorized use, copy, reproduction, or distribution of this software is strictly prohibited.
